## ALSTOR 822

**The ideal Forestry Machine for all tasks from large blowdown trees to agile thinning operations on sensitive grounds.**

We now introduce the brand new Alstor 822, the successor of the famous Alstor 821. Made in Sweden, a reliable forest machine that lasts. The Alstor 822 has structure made from high strength steel and the entire drivetrain is fully protected inside the chassis. The articulated steering, generous ground clearance and eight-wheel drive enables you to always select the shortest path in the forest, thereby making operations highly efficient and comfortable. A high transport speed makes it quick and efficient to move the machine between sites. On longer distances, transport is made easy since a regular car trailer is sufficient.

Alstor 822 has a brand-new front chassis where the removable skid plate makes maintenance quick and easy. The operator area has been optimized with more storage space, a flat floor, improved ergonomics and improved access when entering the machine. The tractive force is increased with thanks to the new 24 hp Yanmar engine and a new CVT configuration that will give you more power and better control in rough terrain. An improved driveline provides better braking performance, easier access for maintenance and even better reliability than before. Alstor 822 now has differential gear equipped axles with mechanical locking which makes the machine more agile, improves access in the forest and minimizes the damage on the ground. The new load space has stronger bunks and is designed to make loading and unloading easier and to hold the logs more firmly in steep terrain. It is also designed to make the machine more flexible for future customisations.

**Load Capacity:** 3000 kg

**Length:** total: 5.37 m/lång 5,77m

**Width:** 1.58 m

**Operating Weight:** 1900 kg

**Engine:** 3-cylinder diesel, 24 hp

**Power Train:** CVT and 3-speed gearbox + reverse, 8wd with locking differentials.

Boogies made from high strength steel with roller chains in oil bath.

**Brakes:** Hydraulically operated travel brake, mechanical parking brake.

**Steering:** Power steering, tilt steering wheel.

Reverse drive controls.

**Tires:** 25x12,5-10, 8-ply (27" option)

**Speed:** 0-25 km/h

**Crane Options:** standard 3.8 m, 350 kg lift at full reach

**Option 1:** Telescopic crane 4.2 m, 320 kg lift at full reach.

**Option 2:** Telescopic crane 5.0/5.4m, 300 kg lift at full reach.

Selecting the right machine for the job makes forestry efficient and enjoyable. Contact your closest dealer to book a test drive and to get more information on accessories and options

The machine in the pictures might have optional equipment installed.
